Introduction

The Protein Crystallography Training Course series provides lecture programs and hands-on training. The goal of this training course is to disseminate experimental techniques of macromolecular crystallography to researchers or graduate student with an interest in using this specific method to further the scope of their research. This course covers broad spectrum of topics on synchrotron-based protein crystallography, ranging from crystallization of proteins, data collection strategy, phasing techniques, radiation damage on protein crystals, to structure determination of proteins.
